

Maximizing Local Performance¹

Early variety with excellent yield potential and test weight.

Management Comments¹

- Minimum recommended seeding rate: 1.4 million seeds per acre.
- Yield potential may be significantly reduced at lower-than-recommended seeding rates.
- For optimum performance, plant on or up to 2 weeks after the Hessian fly free date.
- Performs best in environments with lower disease pressure. Solid resistance to leaf rust, average resistance to powdery mildew. Below average resistance to scab.
- Medium-short plant height with excellent lodging resistance.

**Positioning
For:**

**West Central
Illinois**

Trait Scores of Products Available In This Genetics¹

Ratings: 9 = Excellent; 1 = Poor. Height: Low scores = shorter. Blank = Insufficient Data.

[1]IMPORTANT: Information and ratings are based on comparisons with other Pioneer brand products, not competitive products. Positioning information is based upon historical observations and analysis of traits by Pioneer Agronomists and Research Managers. Trait scores are assigned by Pioneer Research Managers. Scores are based on period-of-years testing through 2009 harvest and were the latest available at time of printing. Some scores may change after 2010 harvest. Scores represent an average of performance data across areas of adaptation, multiple growing conditions, and a wide range of both climate and soil types, and may not predict future results. Products within a family receive the same score unless observations indicate a significant difference. Individual product responses are variable and subject to a variety of environmental, disease and pest pressures. Please use this information as only one component of your product positioning decision. Refer to www.pioneer.com/growingpoint or contact a Pioneer sales professional for the latest and most complete listing of traits and scores for each Pioneer brand product.
